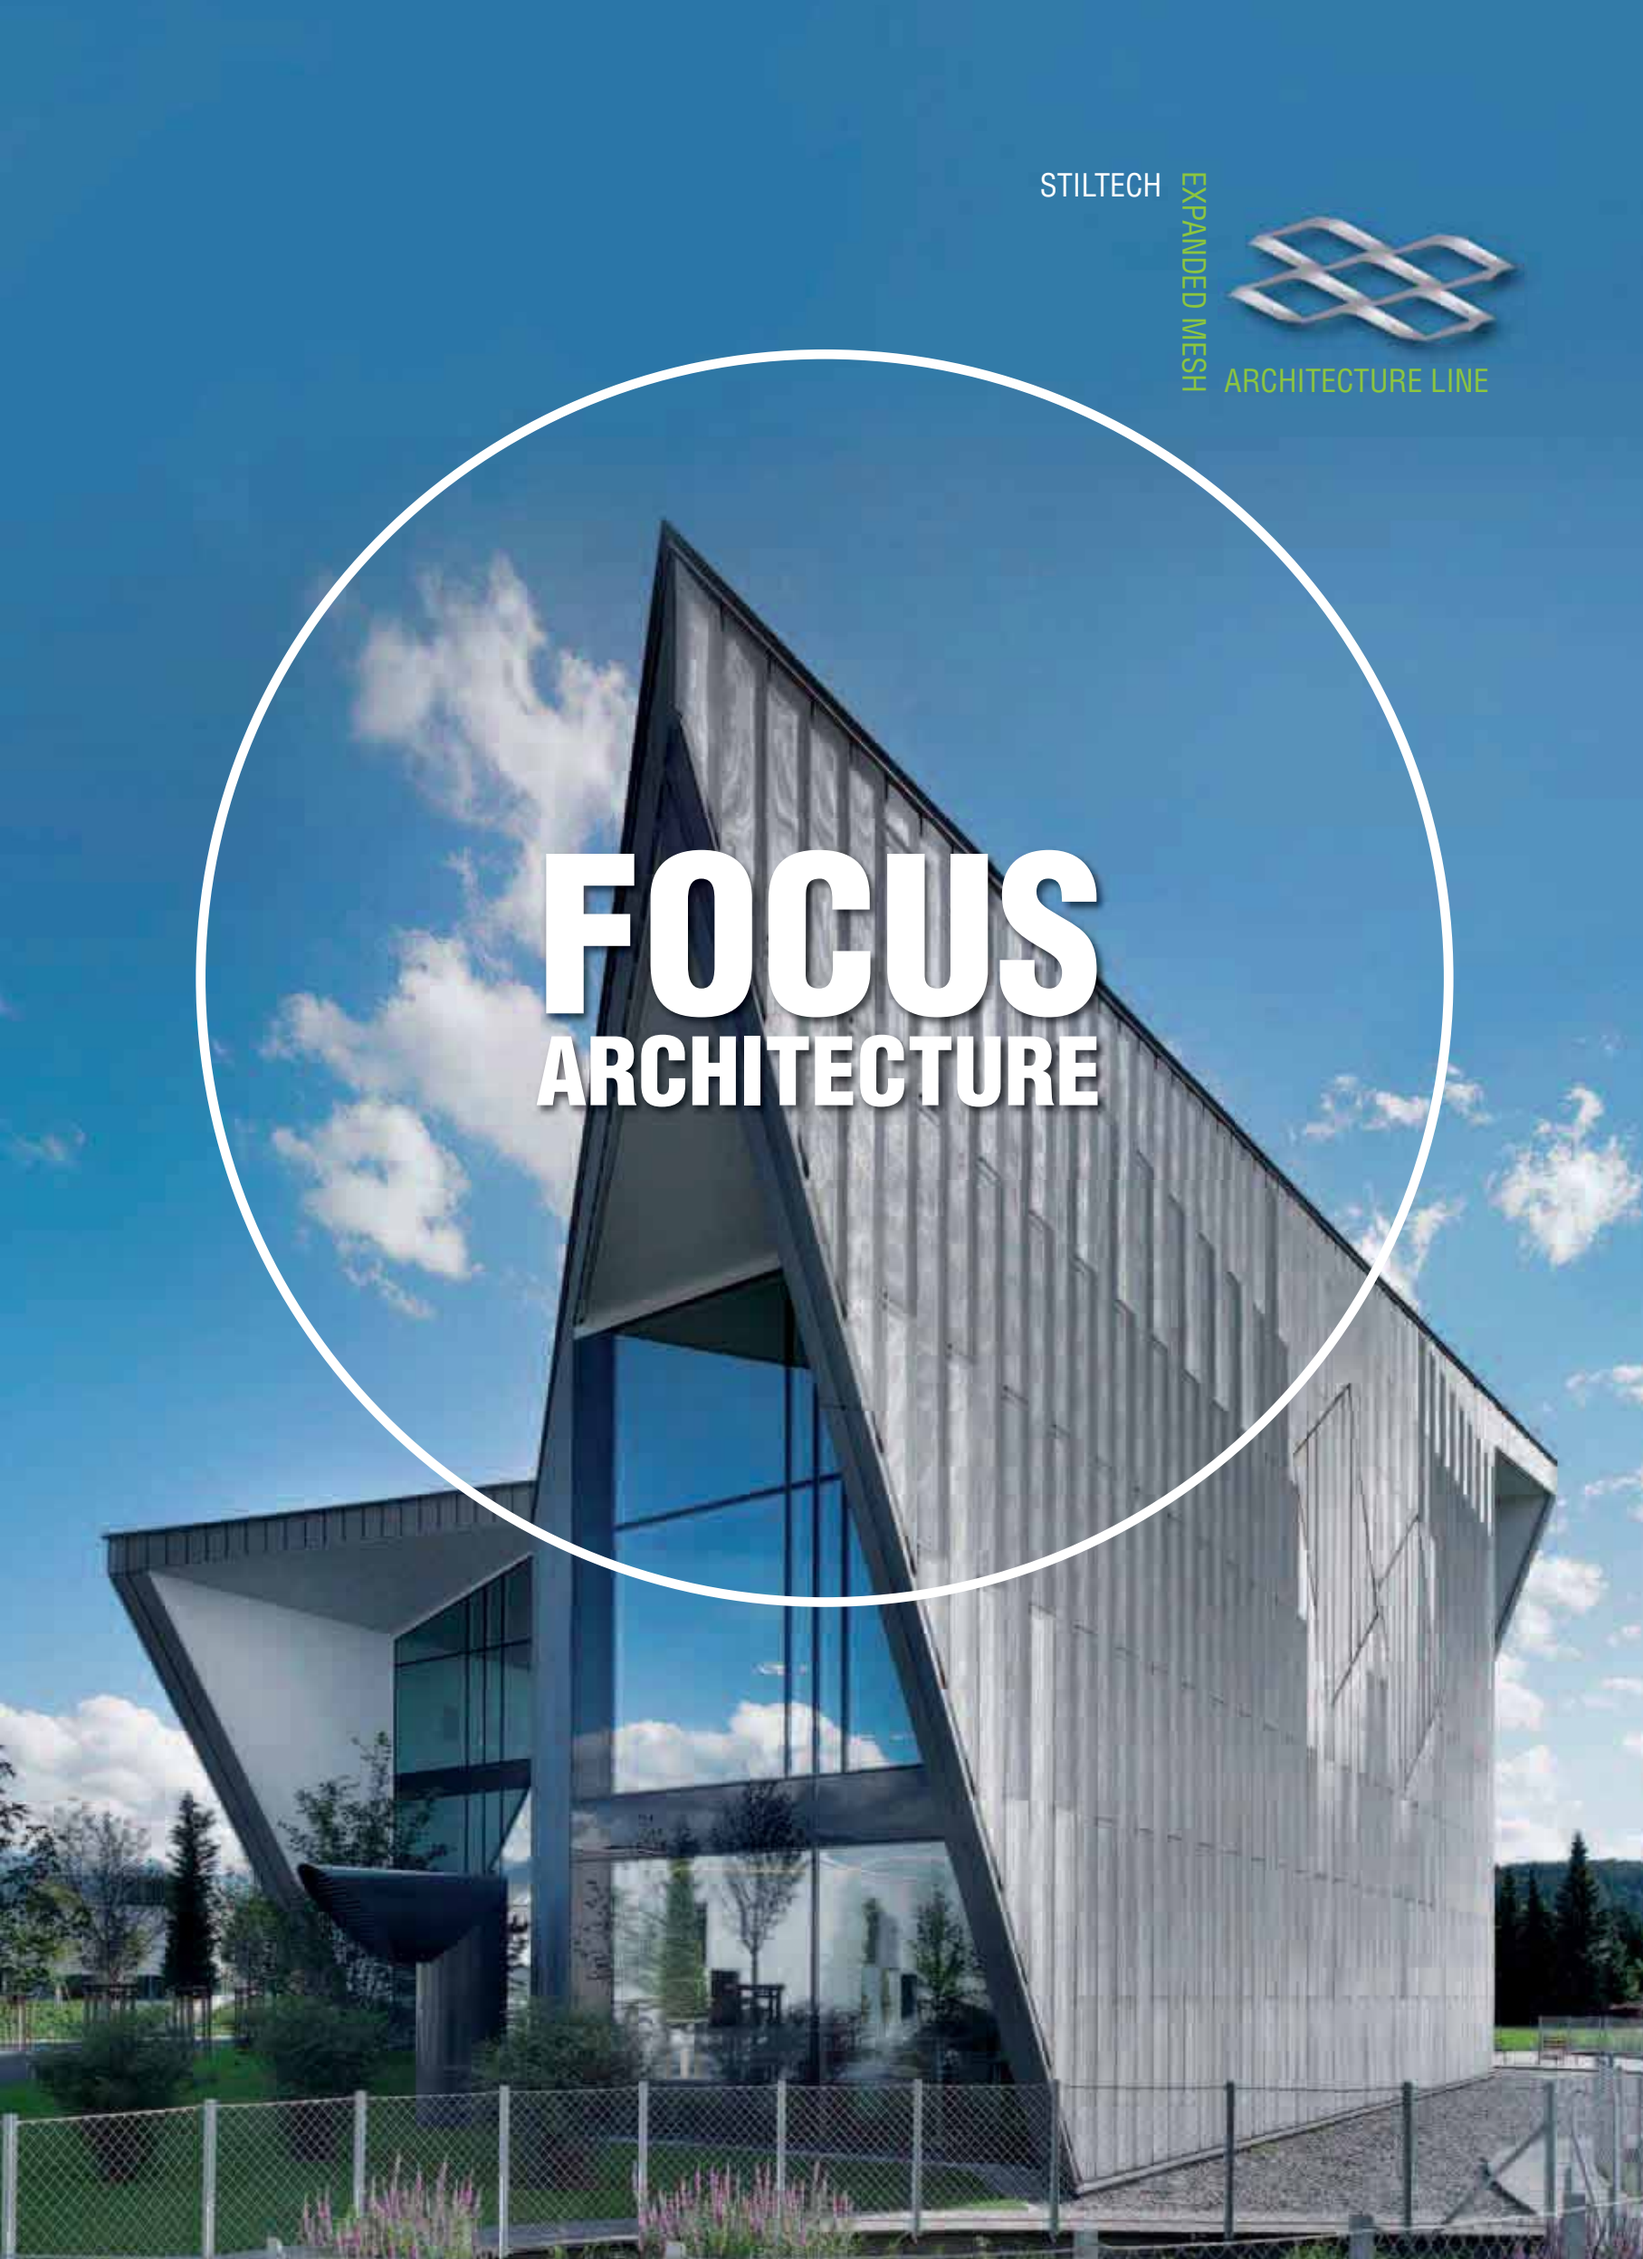
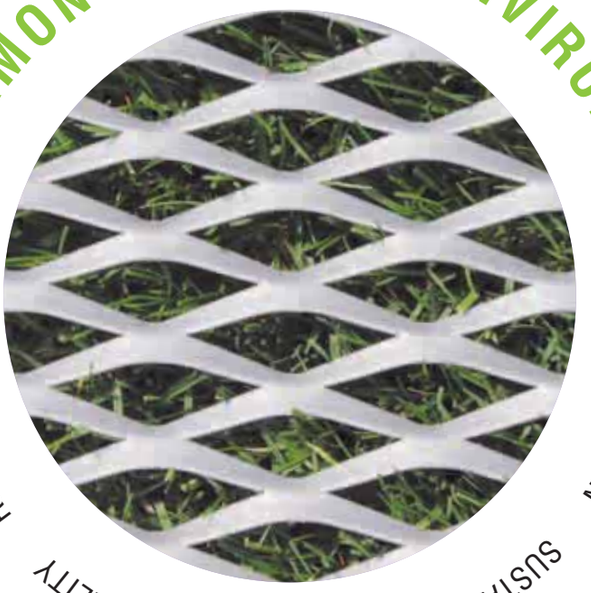
FOCUS
ARCHITECTURE



IN HARMONY WITH THE ENVIRONMENT



PROTECTION

SUSTAINABILITY

AESTHETIC QUALITY

RECYCLABILITY

The aim of this publication is to confirm and strengthen the professional presence of ITALFIM a leading European producer of expanded metal mesh based in Italy in the construction and architecture sectors.

The expanded mesh produced by the Longhi Group can be considered truly “GREEN”. We are committed to minimising the environmental impact of all our processes: responsible use of resources, waste separation, recycling and low energy consumption. For production in harmony with the environment.
Since 1948.

ATTENTION TO DETAIL

Details are a priority

The Italfim STILTECH line: a range of expanded metal mesh for architectural cladding. Add character and originality to your design. Transparent and luminous materials ideal for design projects that enhance the natural local landscape as well as the urban or industrial setting.

Evolved design

Energy efficient buildings with improved sun light control and the comfort of natural light. All possible with expanded metal mesh.

Free shapes, yet safe

Modular design, made-to-measure, without shape or size restrictions. Fitness for purpose and Aesthetics. Mix and match the colours, create contrast or a uniform look.

FOCUS ARCHITECTURE

Ecologically-sustainable material

Longhi Group expanded metal is greener and greener!
Constant commitment to limit the environmental impact of all processes through the responsible use of resources, differentiated waste collection, recycling, and energy consumption.

Corporate responsibility

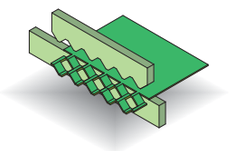
All production phases take place in Italy; personnel are protected by law. Workplaces are monitored, safe, and scrupulously comply with all the regulations in force.

RESPECT FOR THE ENVIRONMENT

THE ARCHITECTURE OF THE FUTURE REQUIRES ENVIRONMENTALLY FRIENDLY PRODUCTION PROCESSES AND MATERIALS

Green energy

70% of the energy required for our production is obtained from our photovoltaic system.



Pollution-free process

“Expanding” is a cold-pressing process that does not require the use of pollutants.

Zero-scrap process

Expanded metal is produced without any work scrap with the optimized use of raw materials.

Recycle

At the end of its long working life, expanded metal is subjected to differentiated waste collection for 100% recycling.

100% Made in Italy

THE ADVANTAGE OF SOLAR LIGHT CONTROL

DESIGN SUSTAINABLE ENERGY-EFFICIENT BUILDINGS
BY BETTER CONTROLLING THE ENERGY INFLOW
THROUGH THE FAÇADE CLADDING

Wellness through natural light

With the comfort of natural light, human productivity increases. In schools, offices, and workplaces. Daylight brings another important benefit: a reduced need for artificial illumination. Brightness can be adjusted using sliding brise-soleil.

Natural environment and landscape

The transparency of expanded metal provides a view of the landscape and a more comfortable feeling. Nature is often less visible in the urban environment; this is the reason behind “vertical green” solutions: expanded mesh can create a metal support for plants.

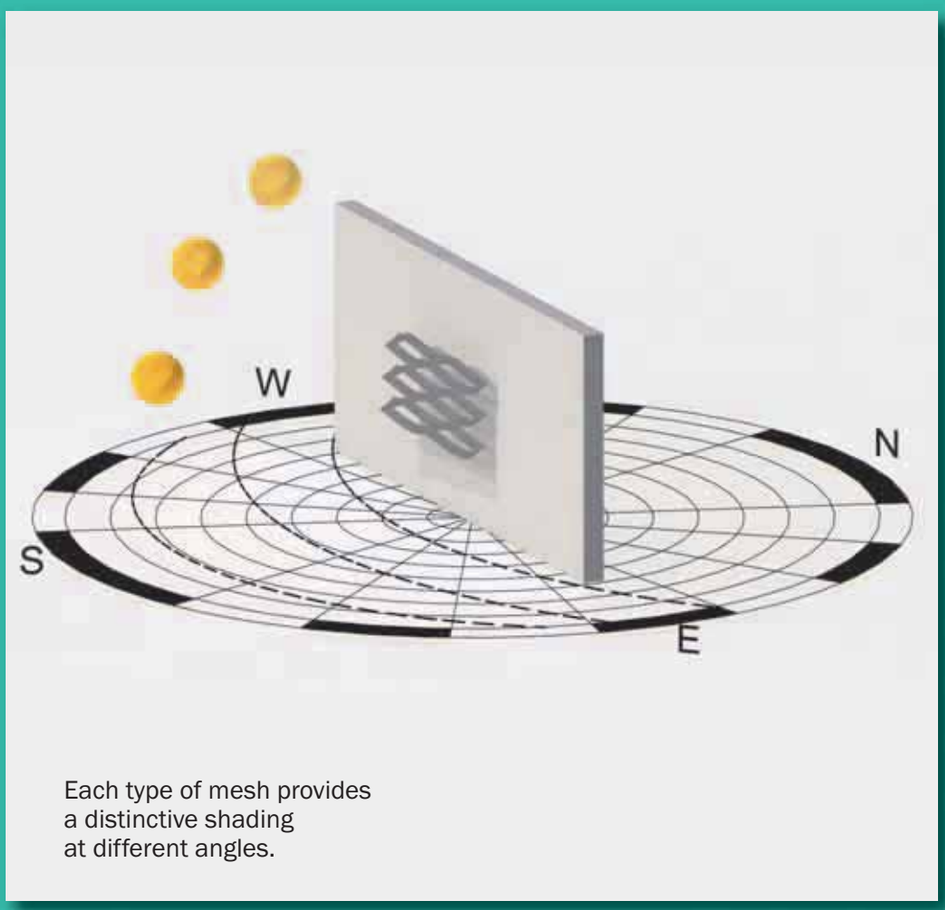
Energy savings and design

“Intelligent shade” limits the flow of heat and reduces the need for air-conditioning in the warmer months. The wide range of mesh patterns available improves the design and also the building energy performance.

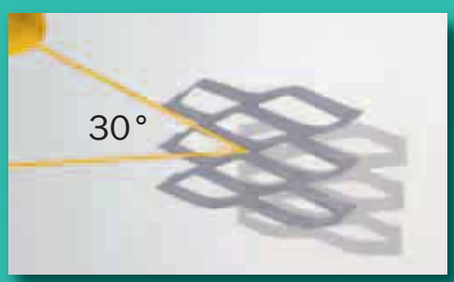
Wellbeing and efficiency

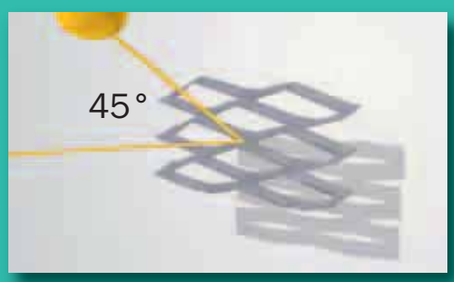
Expanded mesh is a unique material that is both transparent and shading due to the characteristic 3-D shape.

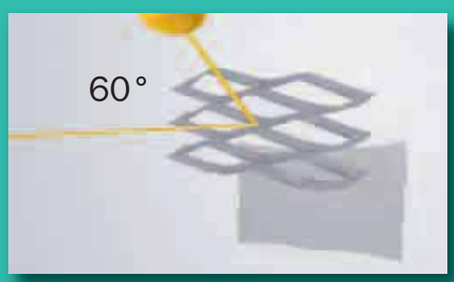
This feature helps with the creation of innovative screening solutions to control the light during the day. The shade provided is greatest when the sun is at its highest. The frontal opening of the mesh maximizes the amount of incoming daylight leaving an open view to the outside world. This makes the rooms in the building bright and cool at the same time.



Each type of mesh provides a distinctive shading at different angles.







The study of light through expanded mesh

Sunlight depends on the geographical position, the orientation of the façade, the season, and the time during the day.

THE DESIGN REQUIREMENTS

PEOPLE'S WELLBEING AND ESPECIALLY
THEIR SAFETY IS THE PRIMARY OBJECTIVE
OF ARCHITECTURAL DESIGN THAT COMPLIES WITH
ALL THE INDUSTRY REGULATIONS

Safety

When the right fastening techniques are used, expanded metal panels are a safe solution in every type of use and application.
This suspended parapet gives a sense of solid protection due to the sturdiness of the material.

Safe and practical solutions for:
- protecting people
- isolating hazards
- preventing risks

Load-bearing capacity in compliance with standards

Load-bearing capacities for walkable surfaces are certified to the Technical Construction Standard NTC2008. Adequate protection is also provided for the respective stairs.

Anti-slip grating

Grating guarantees excellent non-slip results documented by the certification tests specified by DIN 51130 Standard and have also a anti-panic function.

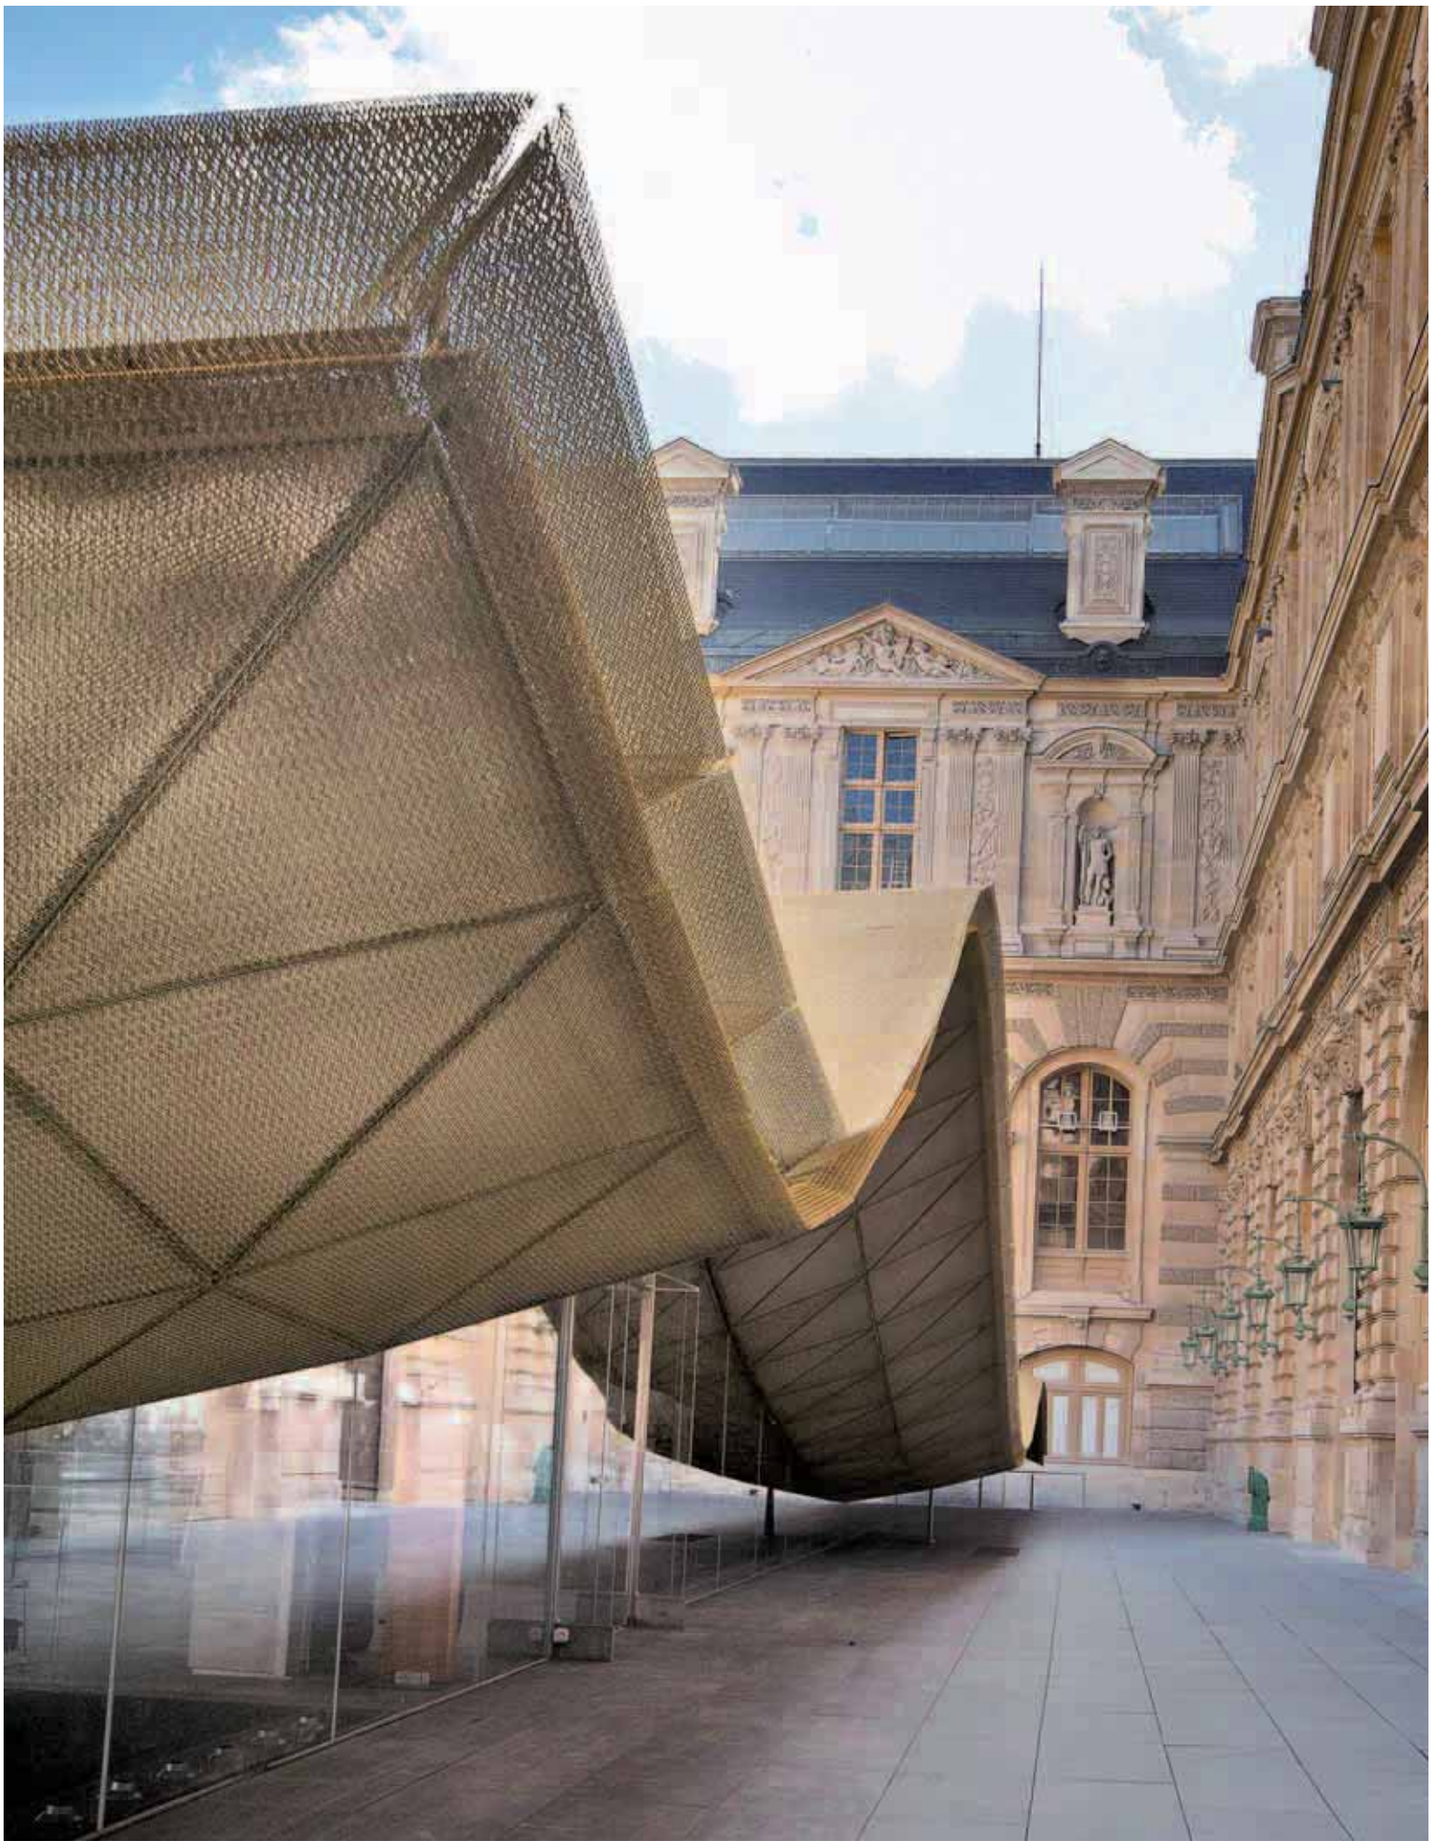
Aesthetic finish and durability

Long experience with architects and architecture has helped Longhi Group develop anodizing, paint treatment, and coating solutions with exceptionally high aesthetic quality and practicality.
An infinite range of colours provides creative and decorative possibilities as well as protection of the material (aluminium or carbon steel) against corrosion.

Strength and durability

The expanded metal used in the construction sector and architecture is dimensioned to resist loads such as wind or snow loads.

The open shape of expanded metal also makes it suitable for applications that require ventilation and air flow such as car parks, utility rooms and transit areas.



© Raffaele Cipolletta, courtesy Mario Bellini Architects

Vertical elevations

Creativity, prestige, impact.
The personal mark on a project is often given by the choice of a distinguishing cladding.
The selection of projects presented here (from many in our history) clearly demonstrate this.
Expanded mesh make buildings stand out in the landscape.
Many leading architects trust Italfim's know-how.

LOUVRE MUSEUM
ISLAMIC ART DEPARTMENT - Paris (F)

Design: Mario Bellini and Rudy Ricciotti
Photo: Albert Greenwood - Courtesy of the Louvre
Expanded metal cladding: METALLTECH
Mesh: MTC A91 - A95 - Patented

View of the impressive golden roof over the new Department of Islamic Art at the Louvre.
Built using 4704 triangular expanded mesh panels it protects the museum's precious collection of Islamic art. This fluctuating, semi-transparent wavy surface was

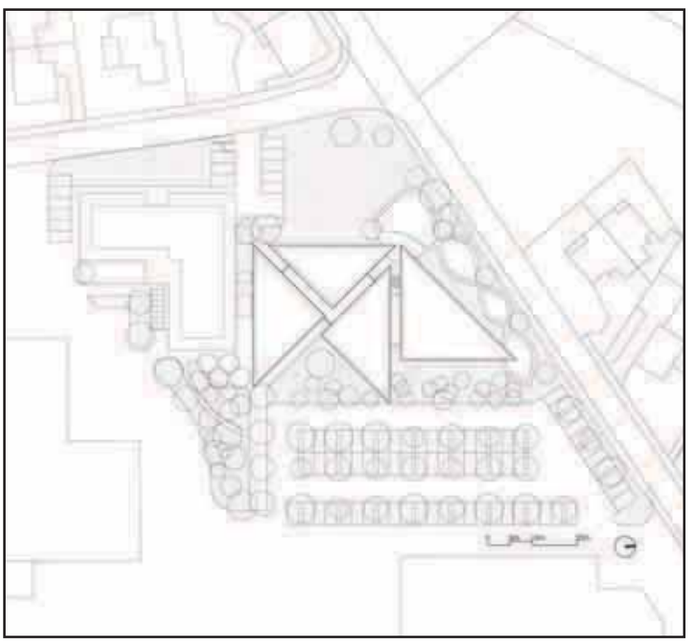
designed to express the concept of co-existence between the distinctive forms of Islamic art and the Louvre's classical 18th century character. It is inspired by the chainmail armor of mediaeval knights.

JANSEN CAMPUS OF INNOVATION AND TECHNOLOGY

Oberriet (CH)

Design: Arch. Davide Macullo
Photo: Pino Musi

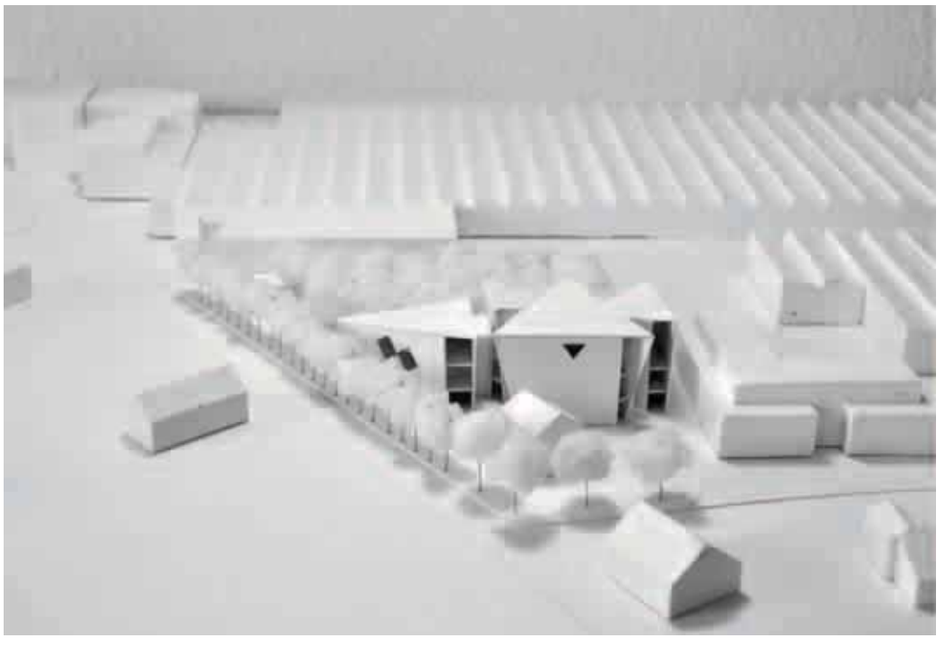
An angular external shape for the new building, reminiscent of a quartz crystal nestled amongst the breathtaking Alps landscape. Surrounded by nature, the large piazza and the wide window clearly define the purpose of the new Jansen Campus: an open space dedicated to communication, meetings and the exchange of creative ideas among professionals.



R 12.75 x 6 - 1.5 x 1 mm - Rheinzink©

Italfim

Oberriet, like a typically Swiss landscape, shows a multitude of sloping levels, each of a different size and at different angles and directions. The overhanging roofs are one of the main features of this new building, creating different shading effects and light reflexes throughout the day. Long vertical expanded mesh panels lay side-by-side to clad the building.



The building appears like wrapped in a fine 3D film, pierced by the large glazed windows over the park.

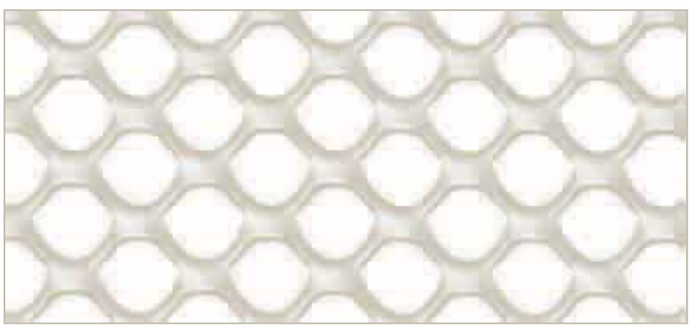
The expanded mesh is made from dark pre-partinated Rheinzink© titanium zinc.
This special finish gives the material a colour in synthony with the local wooden buildings.
Used for external cladding, it shines with different effects of shade and reflex though the day.
The modular structure and dense elongated pattern add to the scale of the building and make the approach to the structure interesting and a pleasing experience for the visitors.

TONI AREAL
Zürich (CH)

Design: ARK - EM2N Architekten AG
Photo: Huber Wettingen

A sequence of volume blocks to create the TONI AREAL complex in the heart of Zurich.
Designed to host a university campus (arts, culture, dance and music), its external façades consist entirely of a combination of glass and pre-formed expanded mesh panels, creating a metallic intarsio effect.

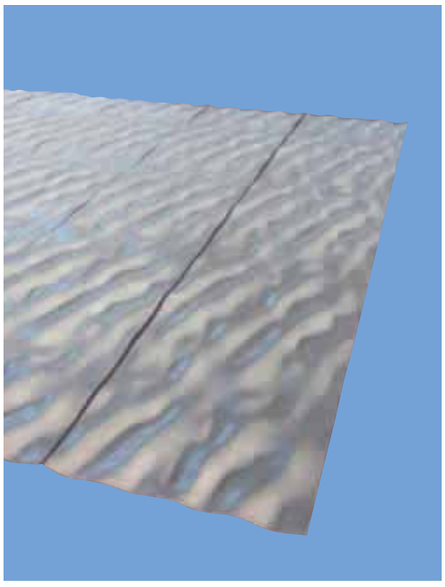
TAU 40 - T 20 - 3.25 x 2 - Ø 10 mm - Anodised aluminium



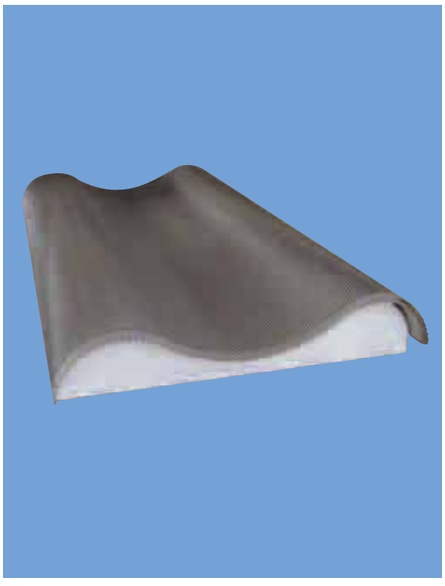
Italfim

Brief history

From 1974 to 2000, TONI was one of Europe's largest milk processing companies.
The production site in Zurich was equipped with highly advanced machinery for the receipt, storage, treatment and shipping of milk and dairy products, such as yoghurt, butter, cream, cheese, ice-cream and powdered milk.



The wall panels facing the inner courtyards are made from pre-formed expanded mesh.
These have been pressed in a special mould to create a “ripple effect”.
Panels are laid out side by side on the long side.



The external cladding panels are also made from corrugated mesh and they are controlled by using a template.

The expanded metal cladding symbolises the origins of this former industrial area, now a modern multi functional urban development.
It combines areas dedicated to education and culture to those used for residential units and the local community, not to mention shops and parking areas.

ST 10 x 7.0 - 1.6 x 2 - Ø 3.8 mm - Natural anodised aluminium

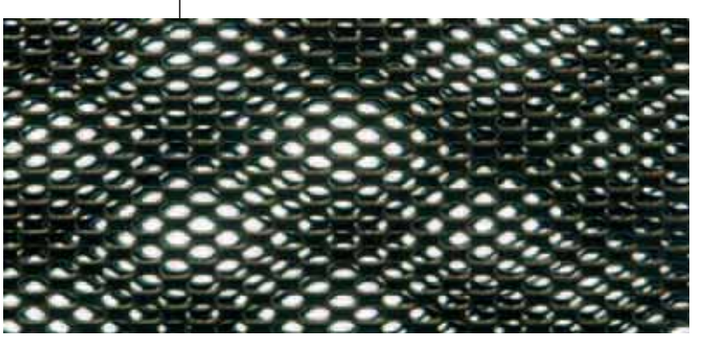
THE CHURCH OF SAN GIOVANNI XXIII
Seriate - Bergamo (I)

Design: Arch. Mario Botta
Photo: Studio Diecidodici

The inside cladding of the main entrance of this small, yet elegant church dedicated to Pope John XXIII is made from two close layers of expanded metal mesh that filter and break up the incoming light.

ST 8 - 1.5 x 0.80 - Ø 3 mm - Powder coated pre-galvanized steel

Double layer of round expanded mesh.
Special pathways for the light are created by a careful superimposition of the mesh panels.



Italfim

The “moiré” effect: the light flow is almost fluid, in perfect harmony with the spiritual context.

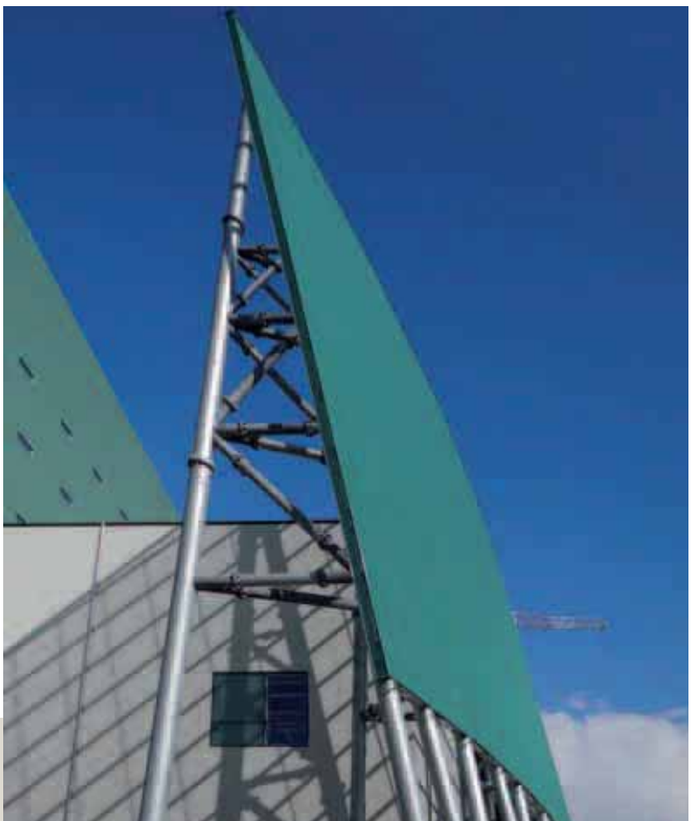
Italfim

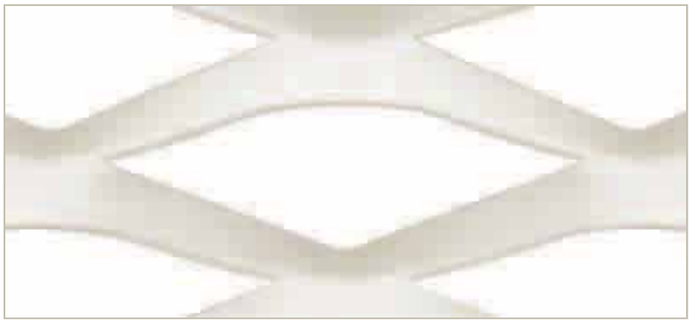
WASTE HEAT VALORISATION PLANT
Bolzano (I)

Design: Claudio Lucchin - Associated Architects
Photo: Claudio Lucchin

The plant refurbishment included the addition of a soft green “sail” at the front, to harmonize the industrial site with the landscape. The expanded mesh is supported by a reticular self-bearing substructure.



RB 75 - R 85 x 35 - 11 x 2 mm - Powder coated aluminium



Italfim

The curvilinear access points have been created by making the sheets of expanded mesh to size.

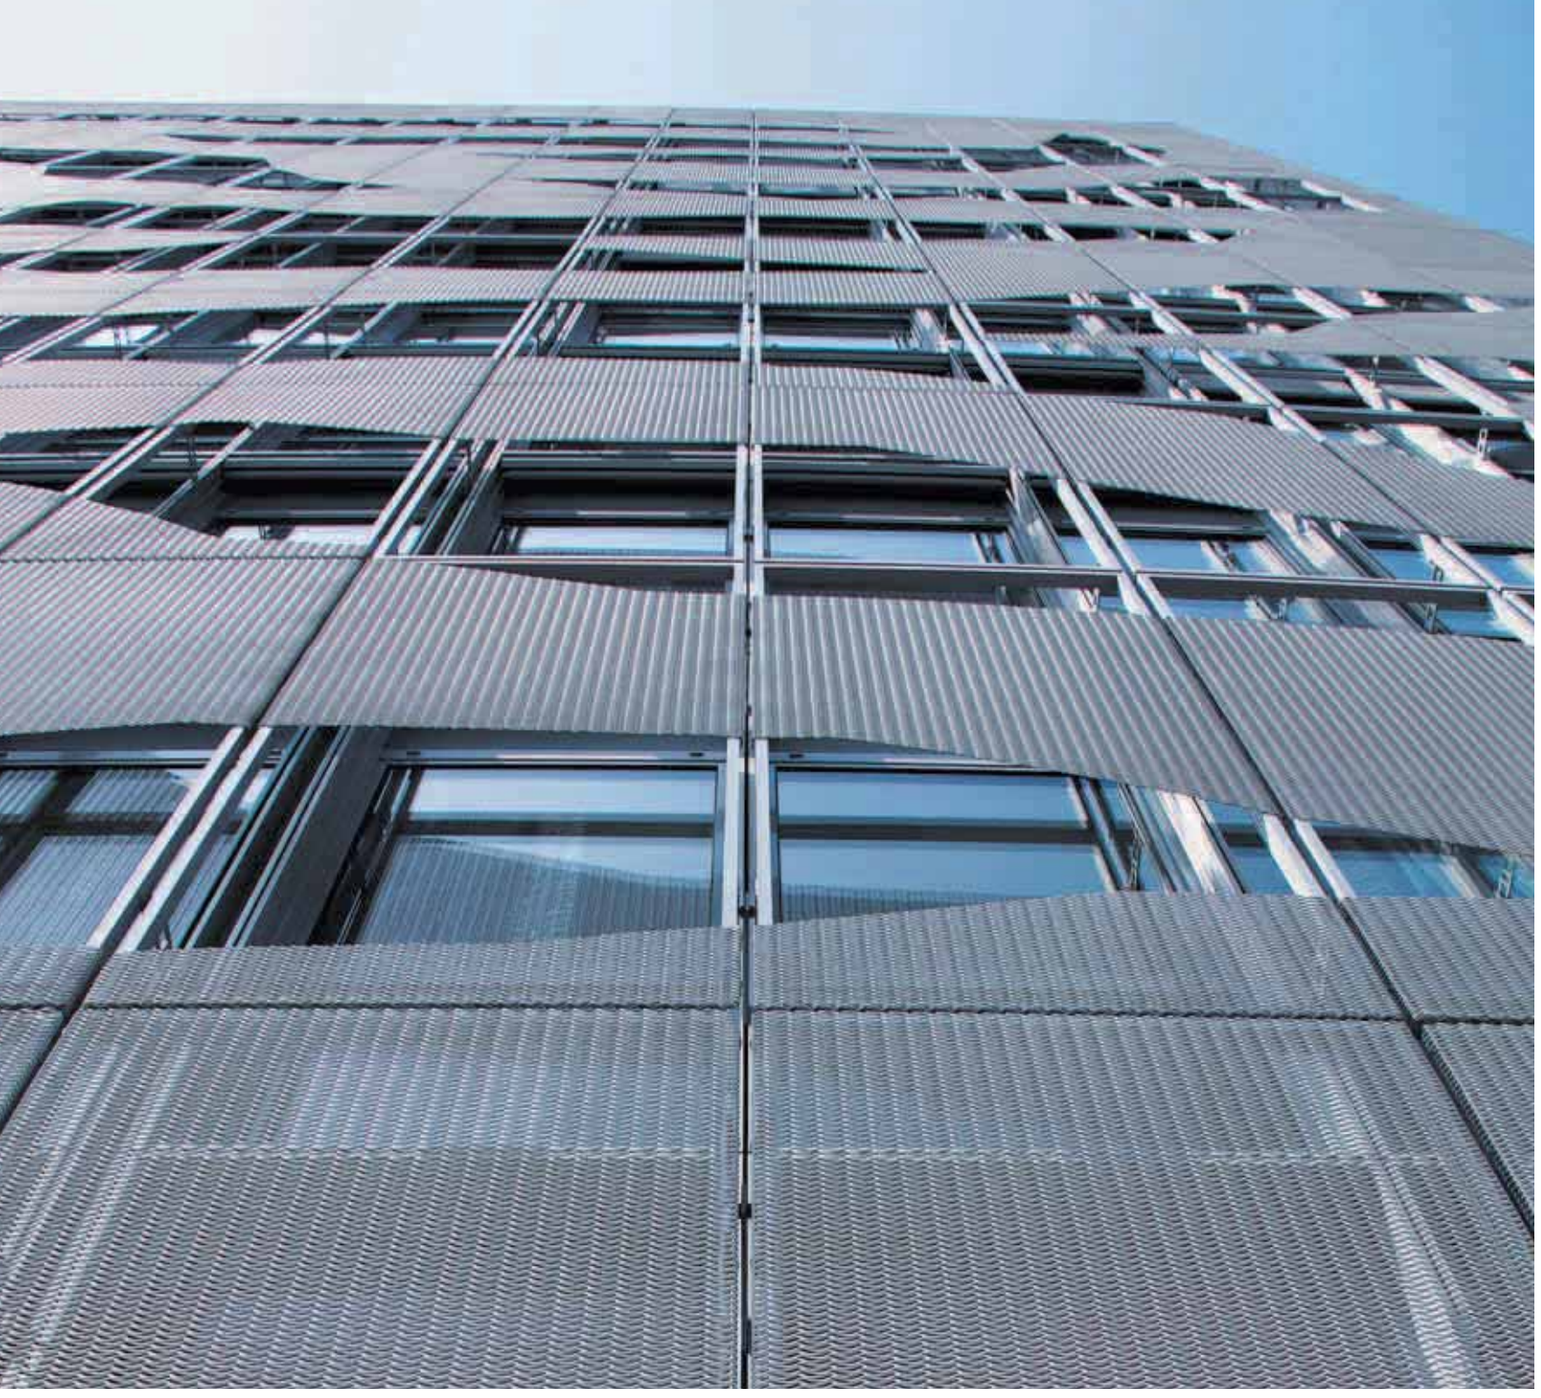
CROWNE PLAZA - VERONAFORUM
Verona (I)

Design: Arch. Mario Bellini
Photo: Studio Diecidodici

Crystals have inspired the sloping shapes of the external cladding, “lightened up” by a cover of transparent expanded mesh.

R 43-AS - R 43 x 17 - 3 x 3 mm - Natural anodised aluminium

Italfim



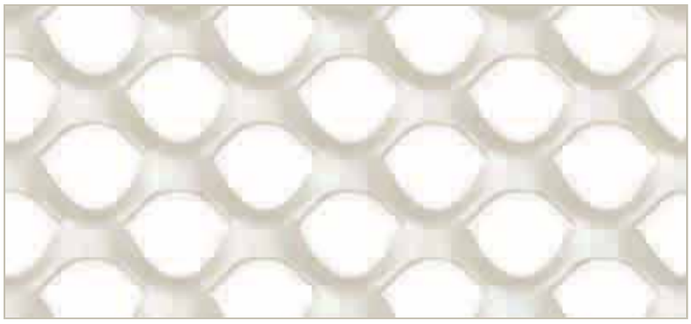
The large façades are decorated with “birds and clouds shaped rips” in the expanded mesh.

GH GENHELIX BIOPHARMACEUTICAL FACILITIES
León (E)

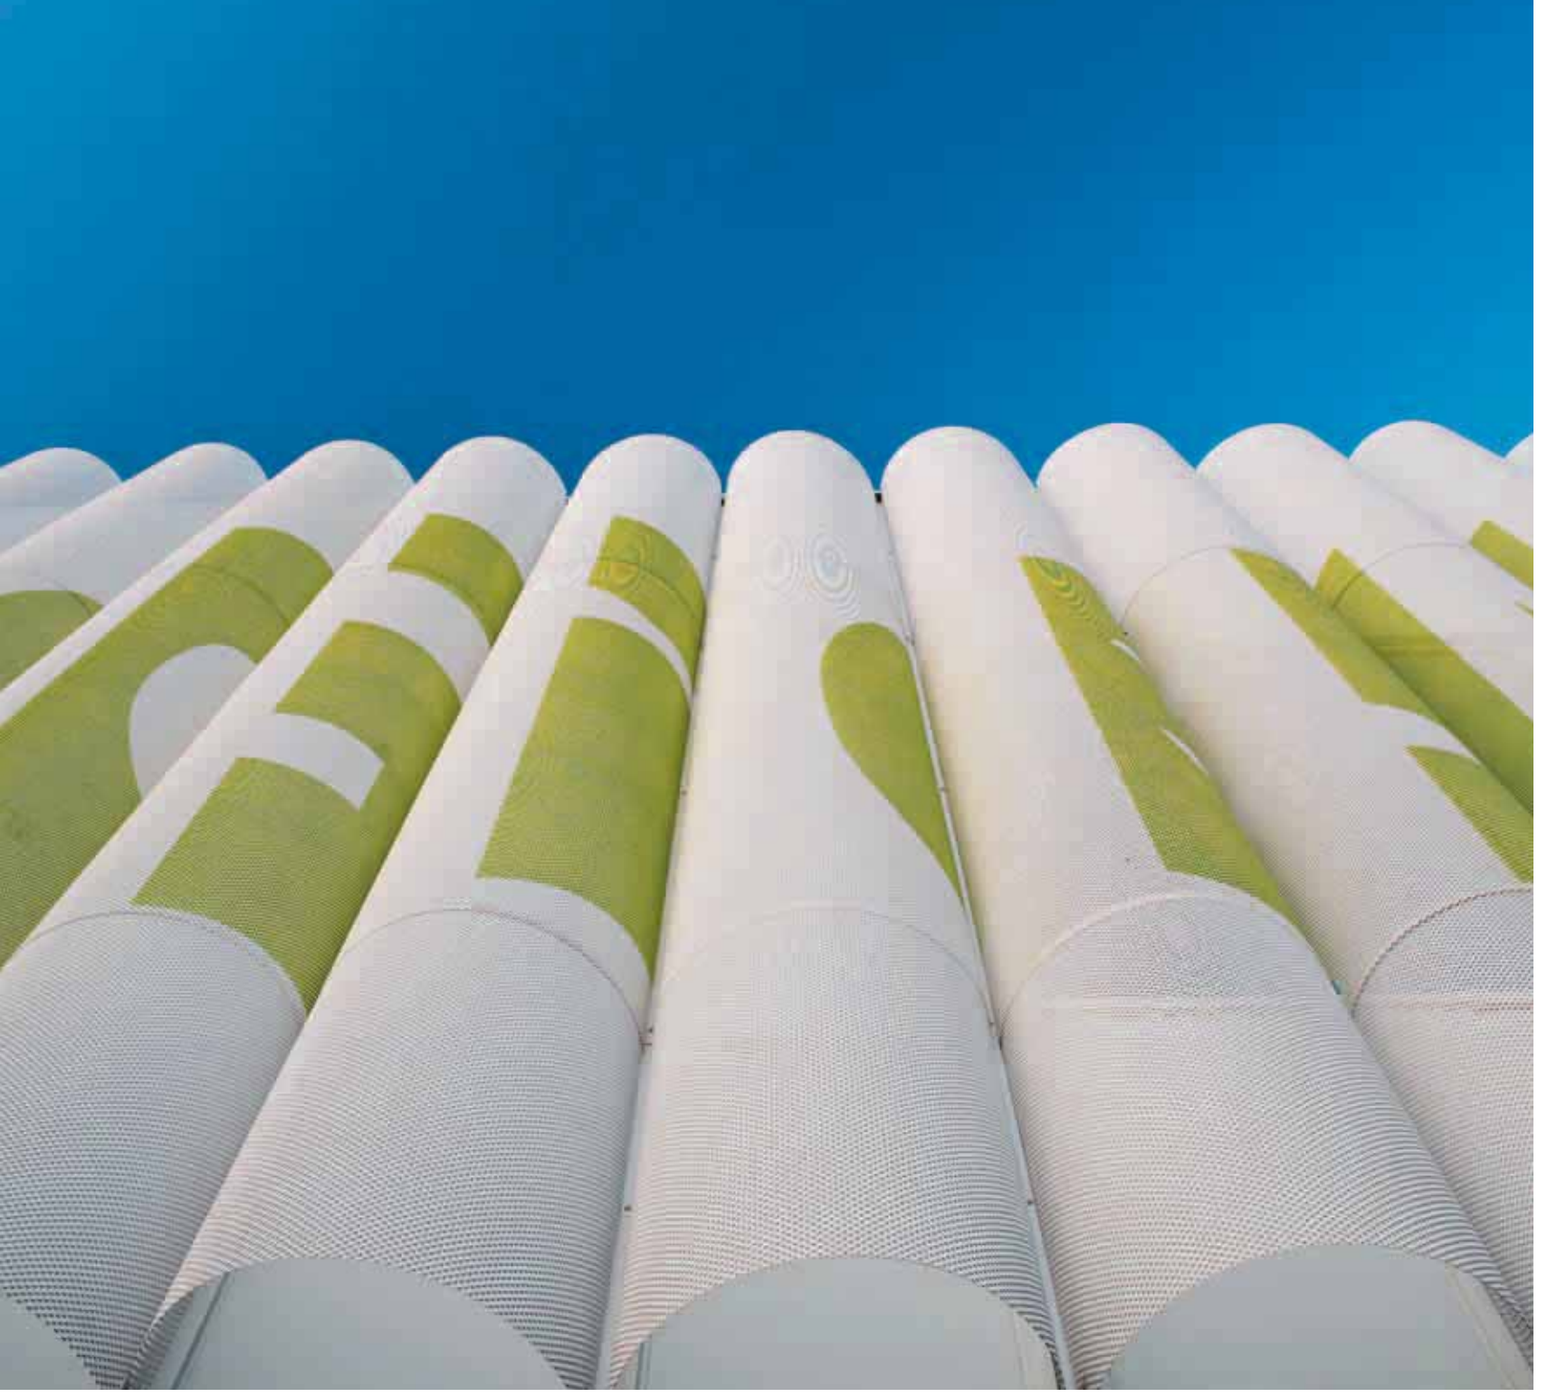
Design: Esaú Acosta, Mauro Gil-Fournier, Miguel Jaenicke, estudiosic
Photo: Esaú Acosta

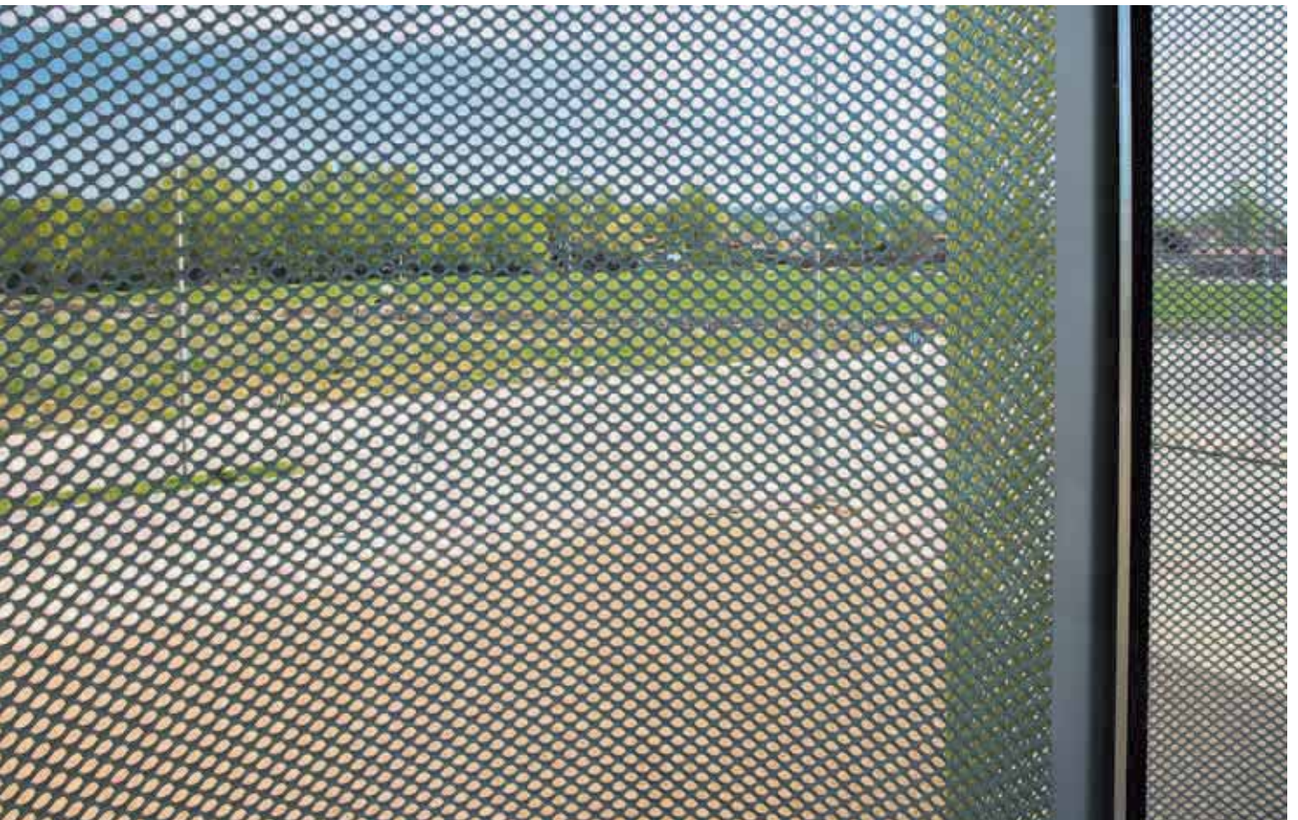
White circular columns made from expanded mesh are the main feature of the exterior of the building.
Standing above the street level, they withstand the name of the company.
The interiors and exterior produce a clean atmosphere perfectly associated to the image of this biotech company.

TAU 50 - T 25 - 4.5 x 1.5 - Ø 13 mm - Powder coated hot dip galvanized steel



Italfim





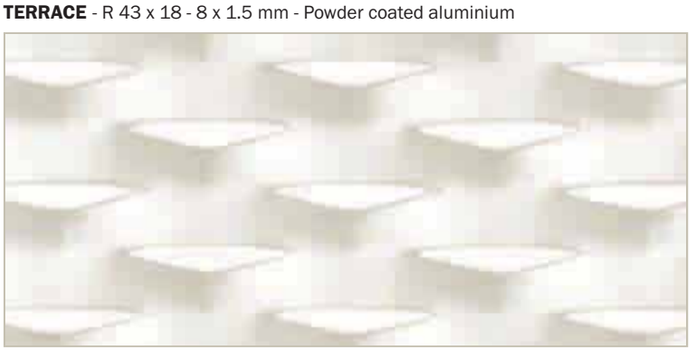
The transparency of the mesh helps those inside get a clear view of the surrounding area whilst exposed to the natural light for their wellbeing.

LAFER BRENDOLA COMPANY HEAD OFFICE - Vicenza (I)

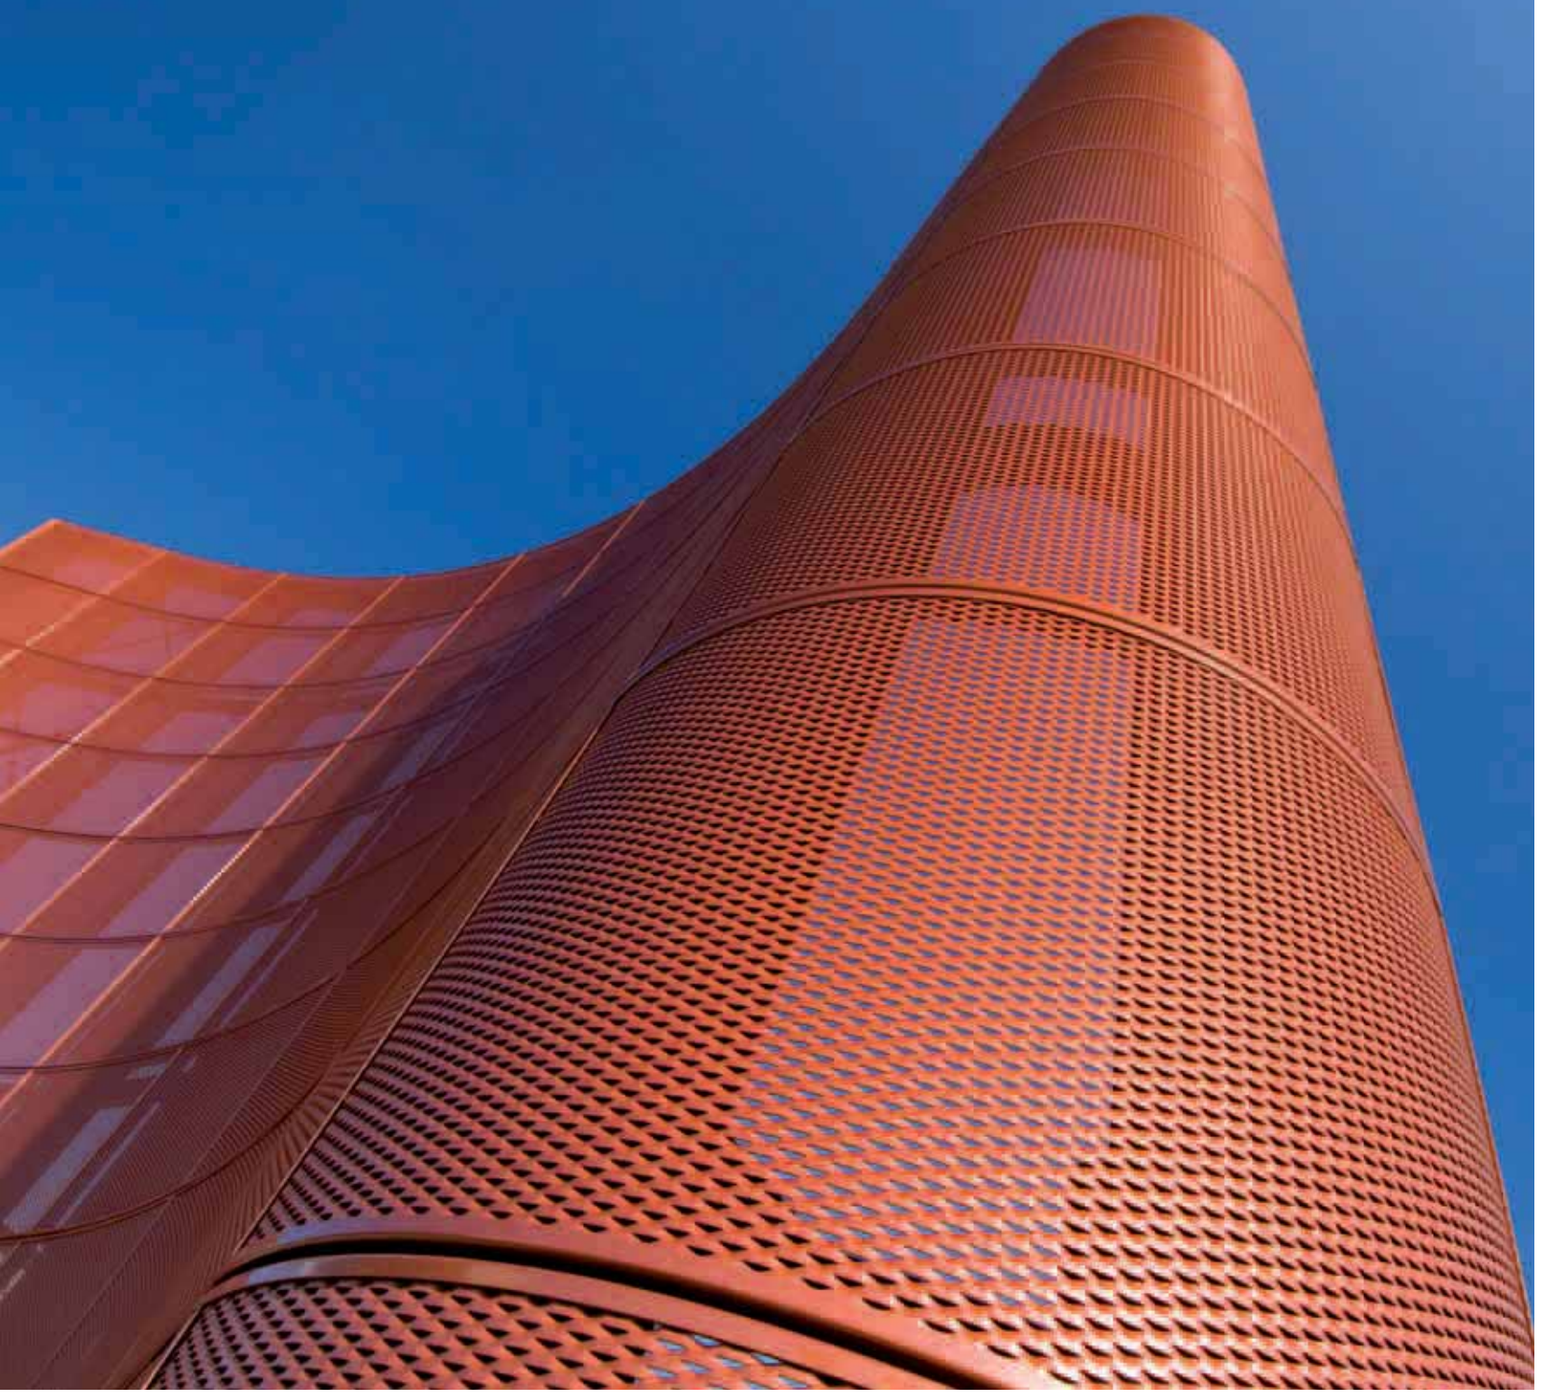
Design: Arch. Roberto Persello and Turrina
Photo: Roberto Persello

This fluid and dynamic stage setting was created using expanded mesh panels in a restructuring project that enhanced the office block and harmonized the entire site.

TERRACE - R 43 x 18 - 8 x 1.5 mm - Powder coated aluminium



Italfim



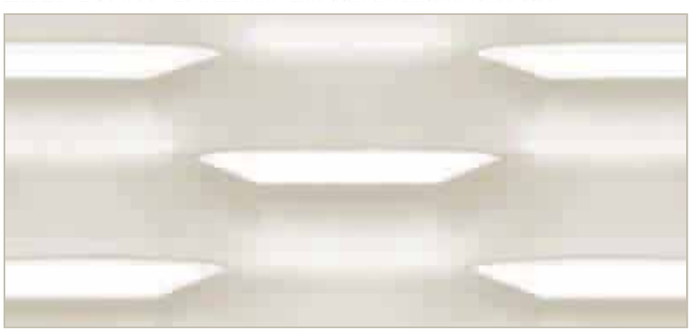
Detailed elevation showing the joints between the two wings of the cladding.

PSENNER DISTILLERY
Termeno Sulla Strada Del Vino
Bolzano (I)

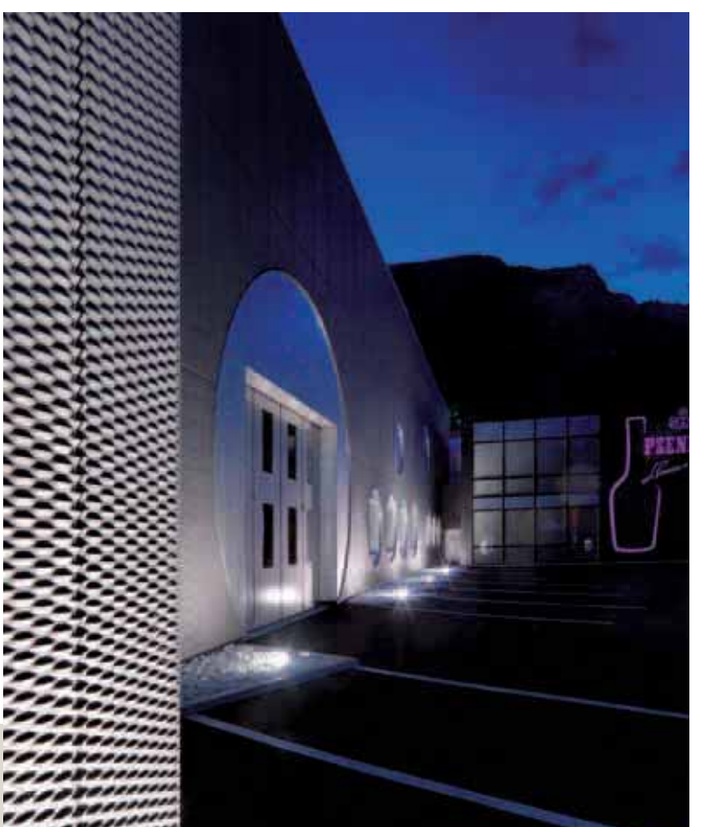
Design: Arch. Freissinger - Elzenbaumer
Photo: Daniele Domenicali

A few round insets have been added to the expanded mesh cladding of the production plant, reminiscent of the “bubbles” of steam seen in distilleries.
The night lighting has been enhanced by fitting the expanded mesh “upside-down” so that the apertures face upwards. This creates a pleasing white light effect.

Exa 16 - E 80 x 30 - 13 x 1.2 mm - Zinc-titanium zintek® rolled steel



Italfim

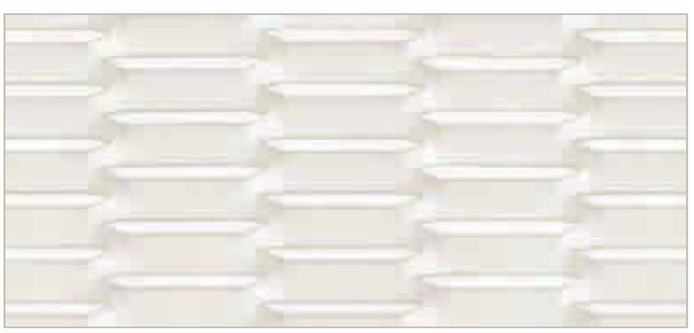


SHOPPING MALL
Napoli (I)

Design: Arch. Pica Ciamarra Associati
Photo: Arch. Pica Ciamarra

Framed panels have been used to clad the main building and protect the stairs of this shopping mall near Naples.
For a transparent metal shell effect.

Deco 91 - E 45 x 8 - 3 x 1.5 mm - Natural aluminium



Italfim

A smooth front disguises
and protects the plant.
The expanded mesh gives
a uniform look to the complex.

COVERS FOR THE MESTRE MOTORWAY TOLL GATES

Venezia (I)

Design: Arch.Tommaso Michieli - Arch.Christian Zanatta
Photo: michielizanatta

Front view of the toll gates at the Mestre motorway exit with high “fin shaped” structures cladded with expanded metal mesh.
The suspended ceiling, also made from micro-expanded mesh, hide perfectly any service cables.

Detail of the pillar protection: an architectural feature, its “outline” seemingly shaped by the wind. The metal surface creates an iridescent effect when lit up at night.

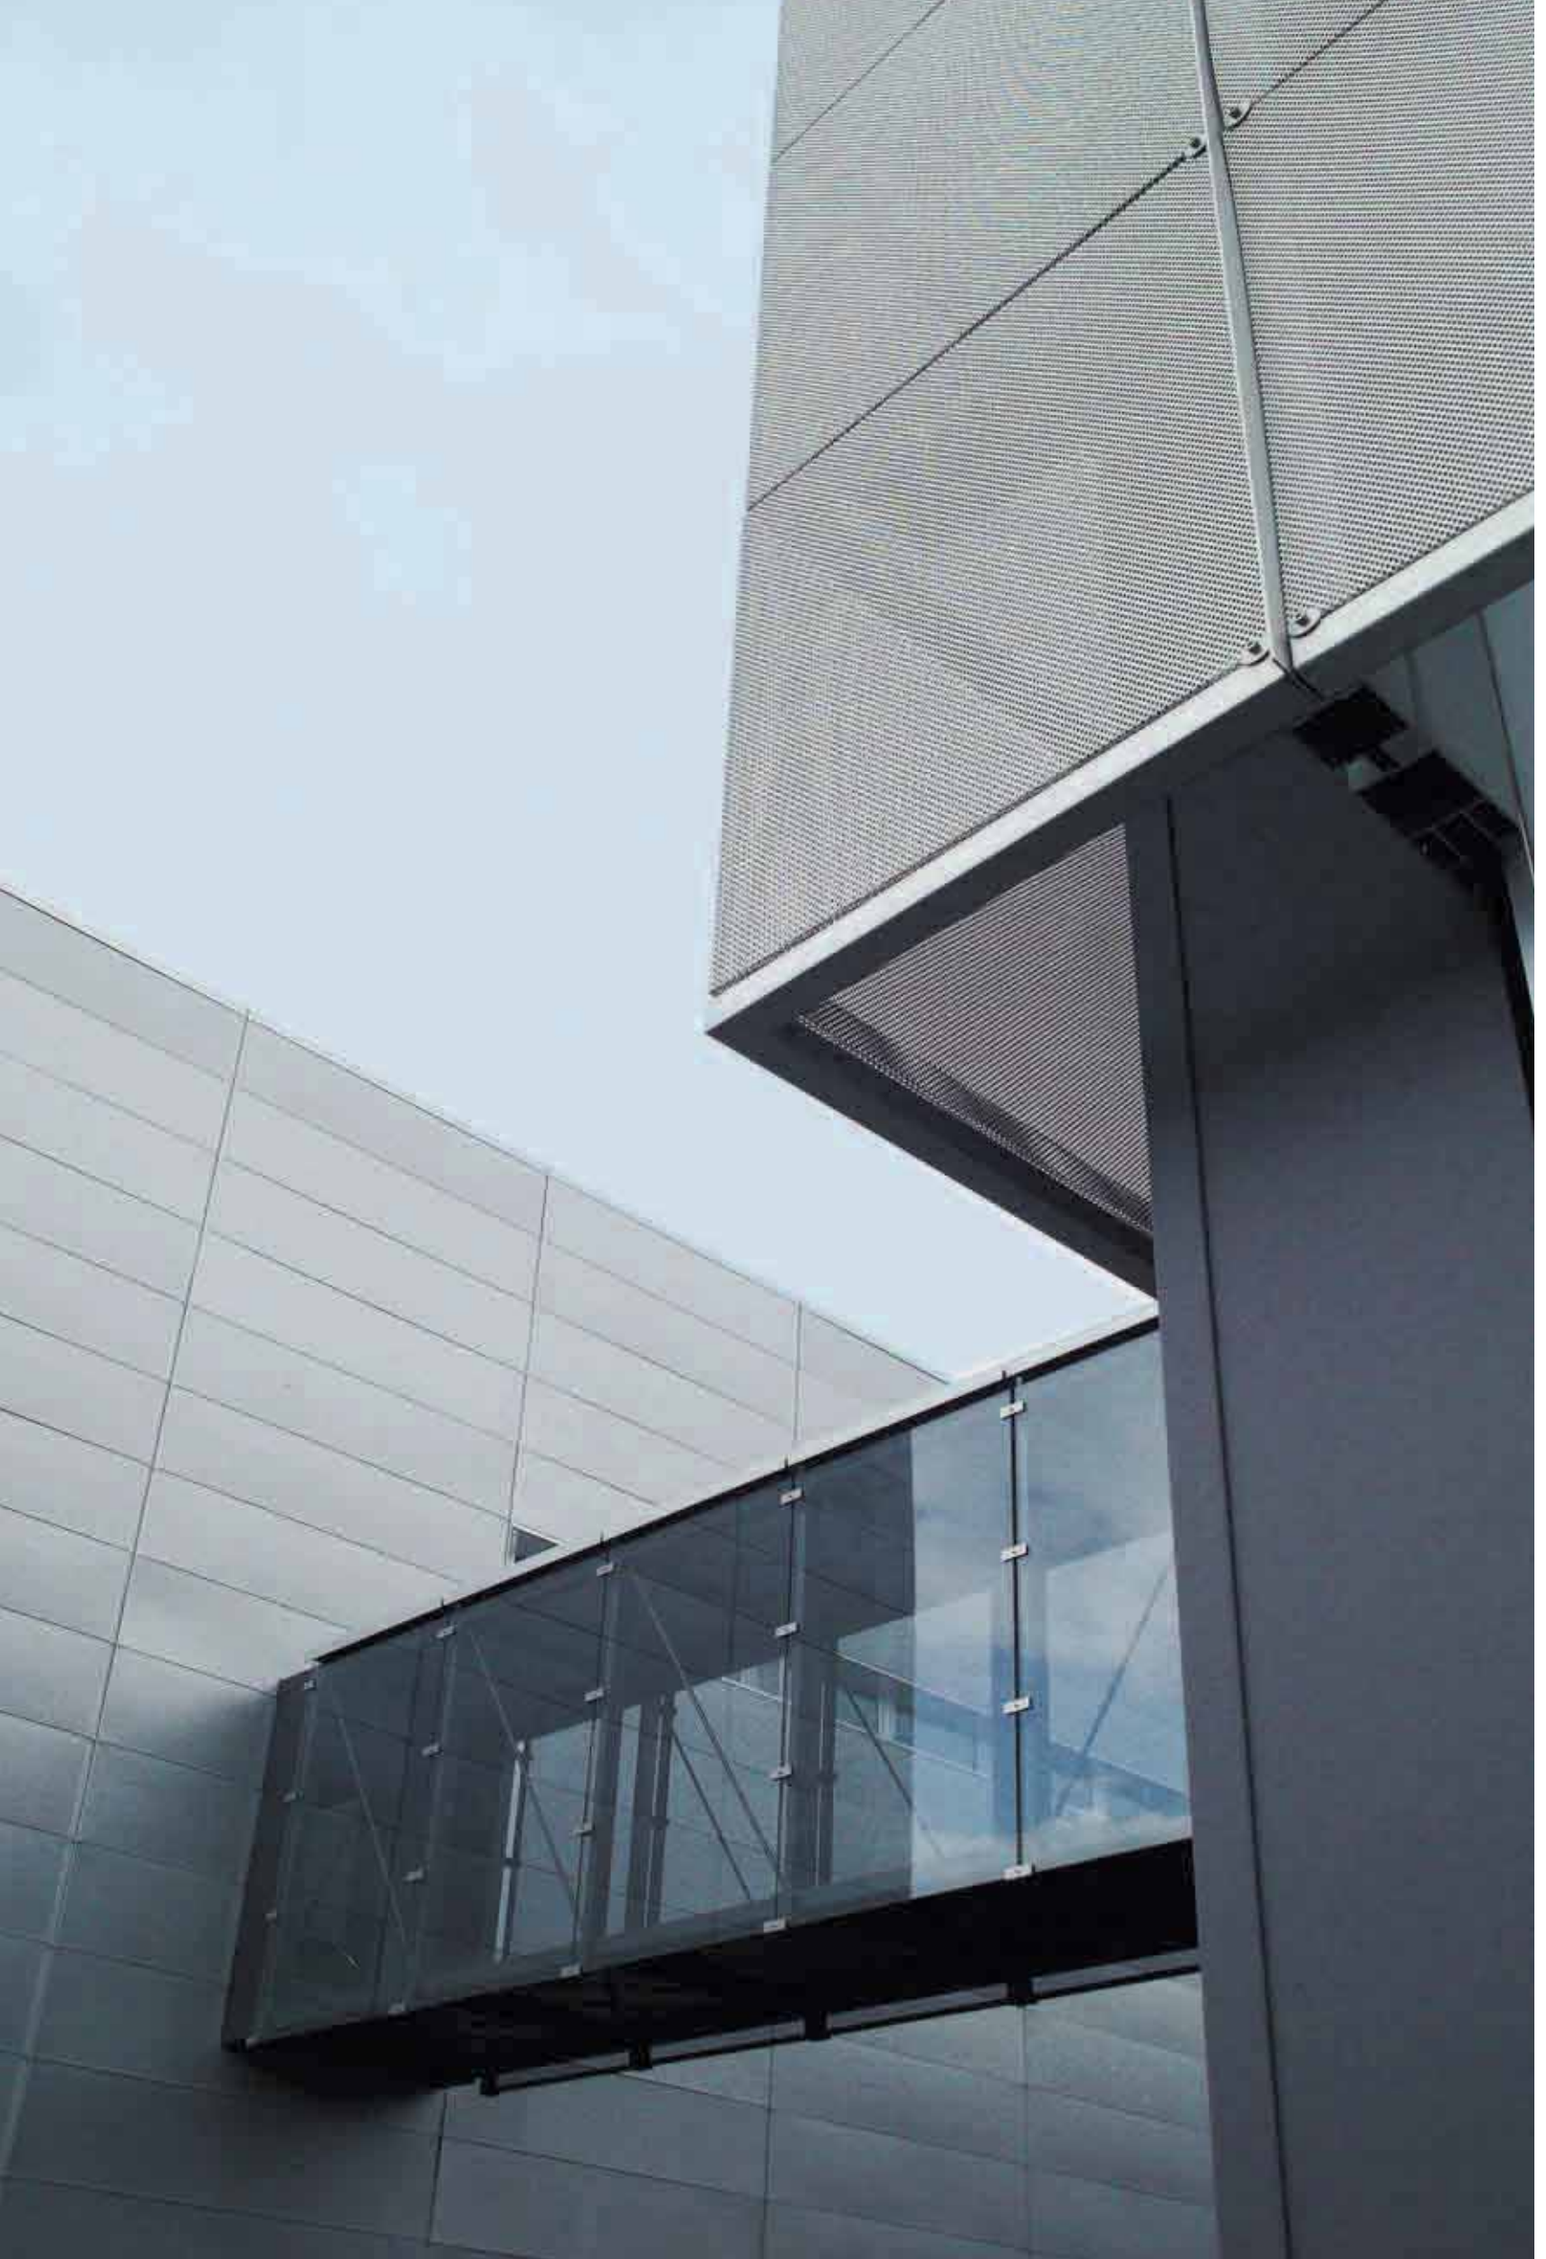
STOPPANI HEAD OFFICE
Neuenegg (CH)

Design: Burckhardt Partner AG
Photo: André Huber

Simplicity and transparency are the key architectural features of this building. The large glass façades are shaded by a skin made from expanded mesh elements. At night the building “sparkles” with light.

ST 8 - 1.5 x 1.5 - Ø 3 mm - Powder coated aluminium

Italfim

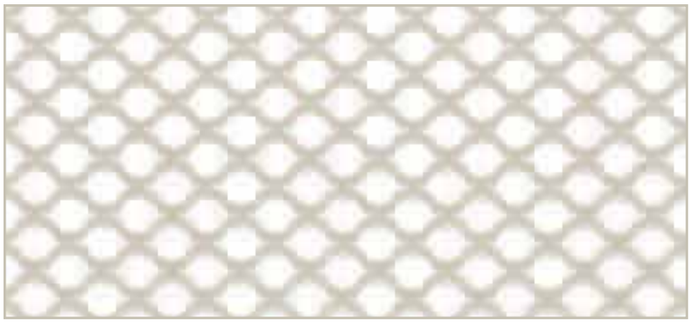


SHOPPING CENTER
Milano (I)

Design: Guidarini Salvadeo, Architetti Associati
Photo: Studio Diecidodici

The light corrugated panels follow the profile of the façade, protecting the glass and enhancing the transparency effect.

ST 10 - 1.6 x 1 - Ø 5 mm (corrugated) - Natural anodised aluminium



Italfim

Details of the shape of the joint at the corner of the building.

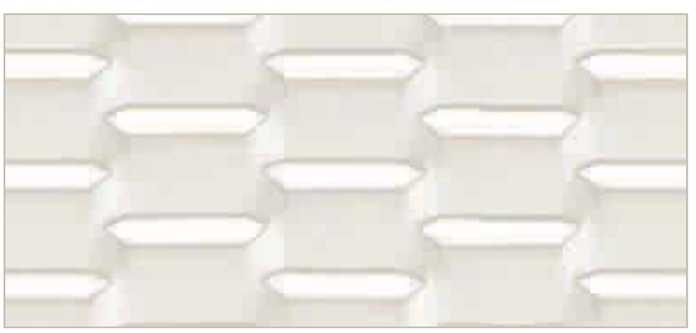
HOTEL RAMADA PLAZA
Milano (I)

Design: Boschi/Serboli Associates Architects - Architect Arrigo Taini
Photo: Studio Diecidodici

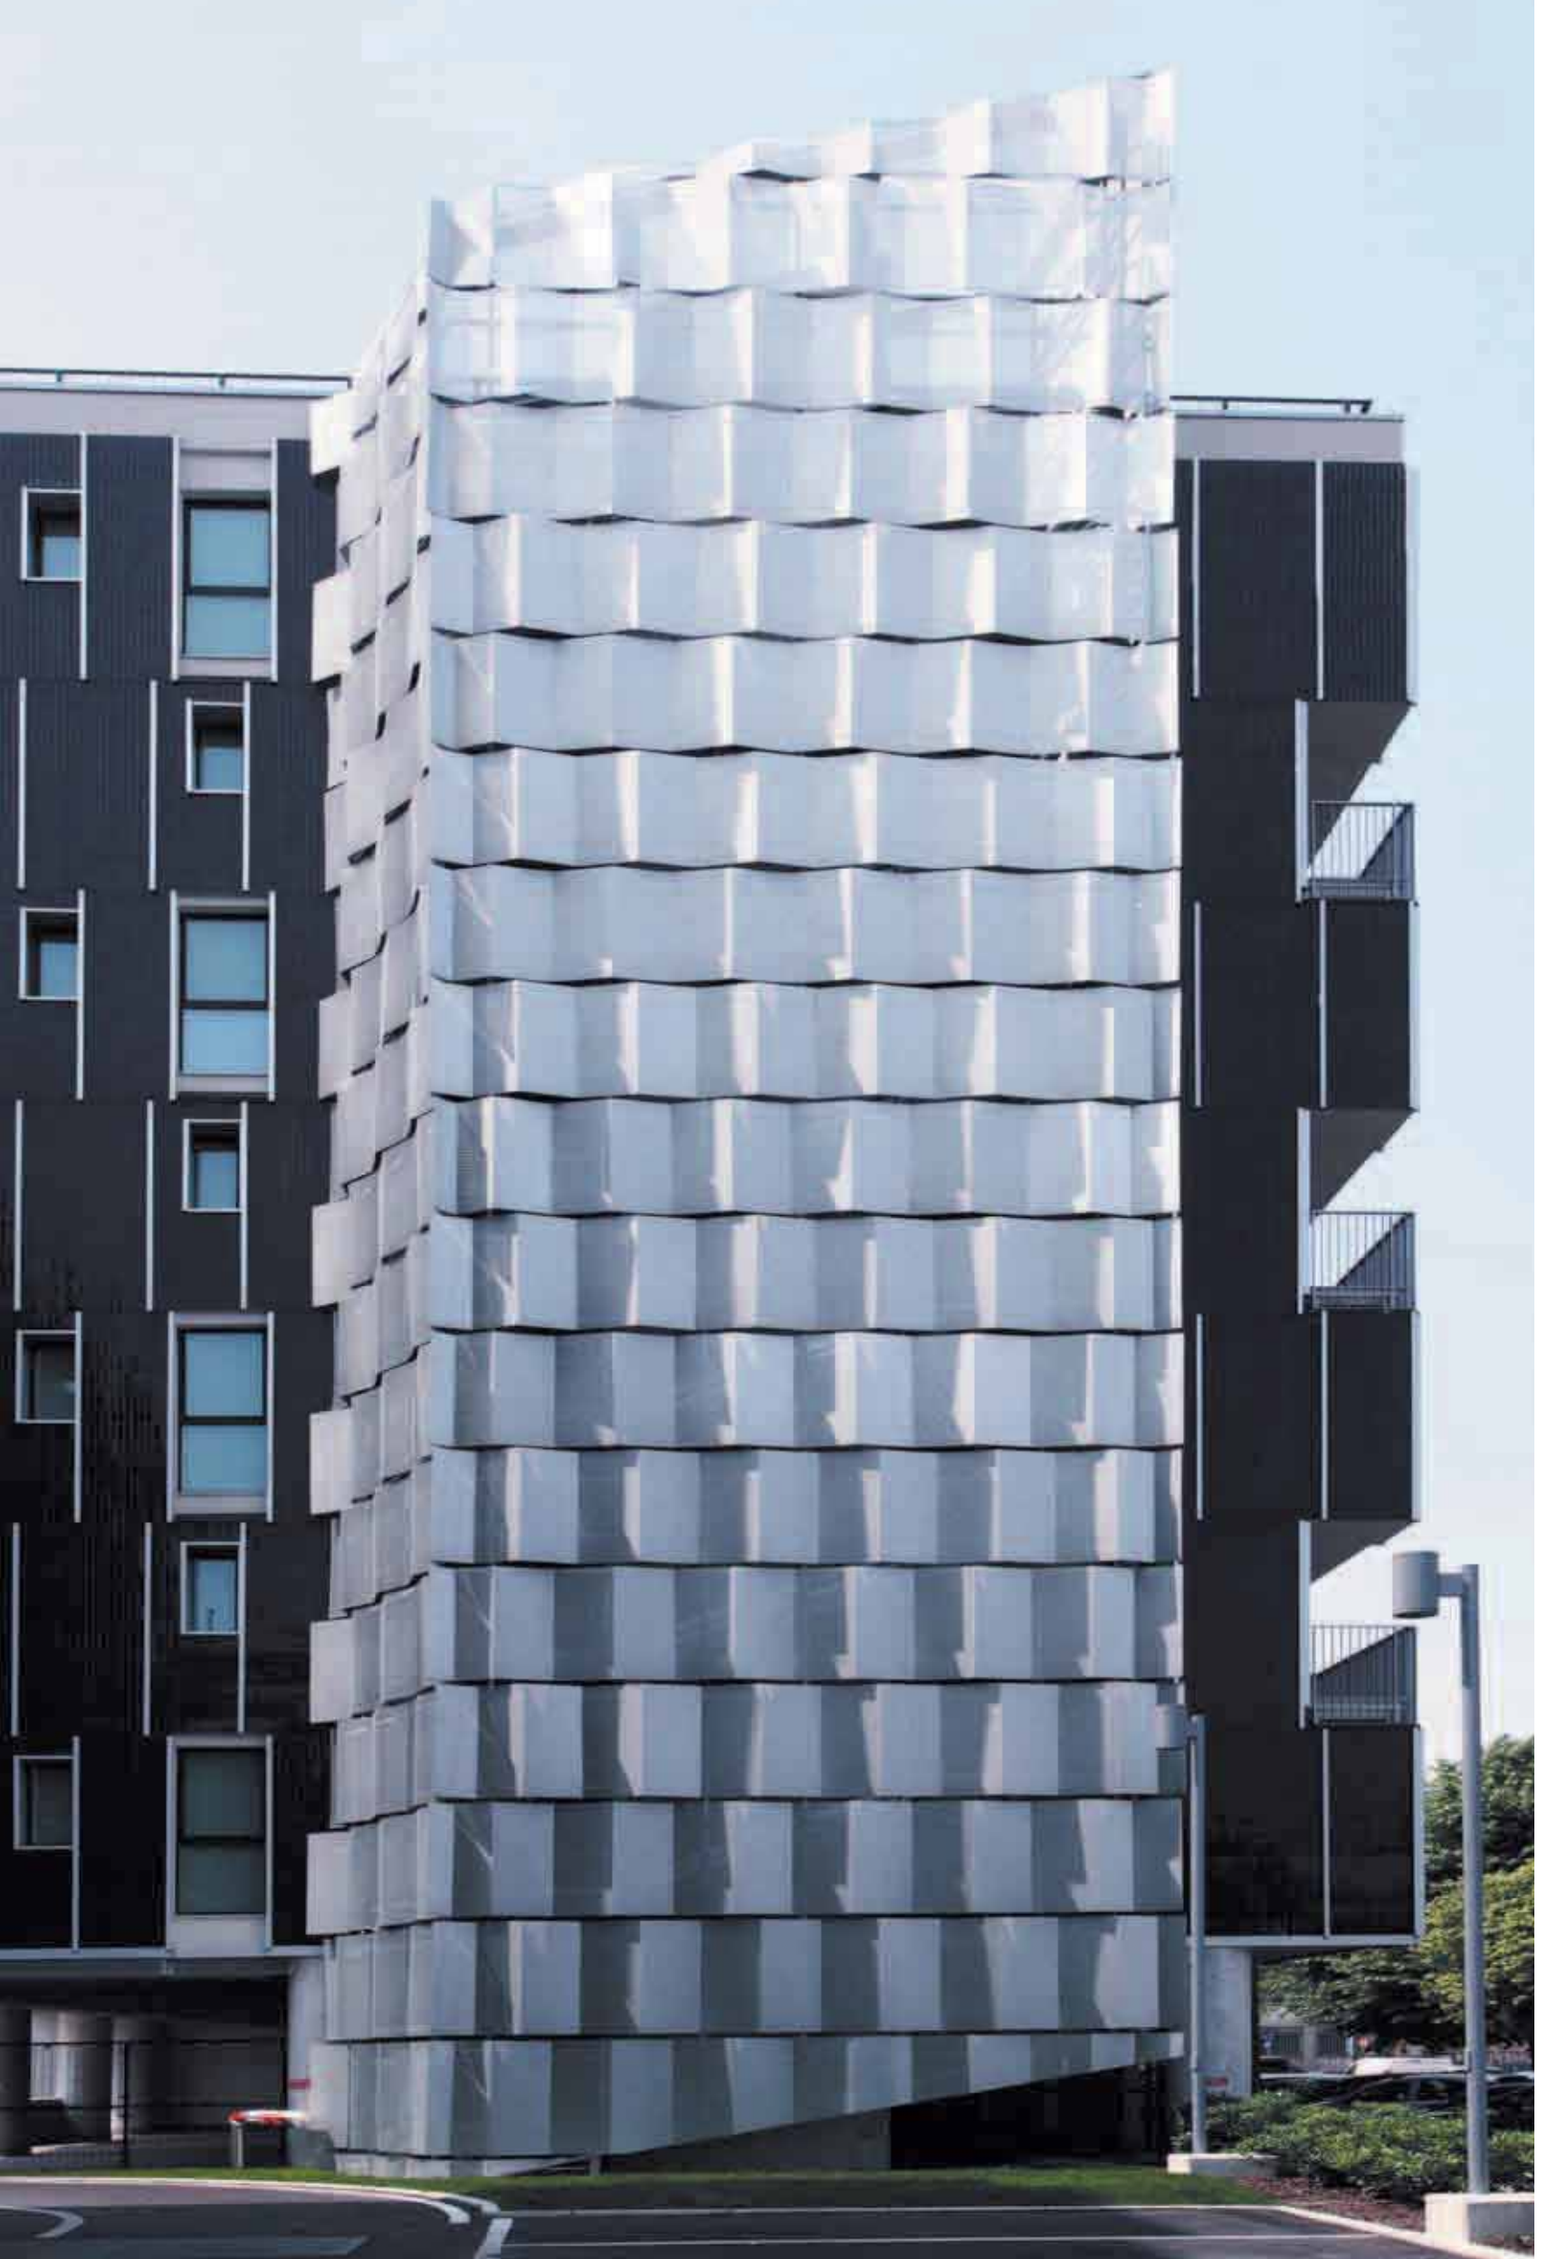
Folded expanded mesh panels have been used to clad the stairwell in this multi-purpose building.
The panels dinamically create light and shade effects that continually change during the day as the sun moves in the sky.

The mesh panels are installed at different angles and staggered.

E 45 - E 45 x 16 - 6.5 x 1.5 mm - Natural anodised aluminium



Italfim



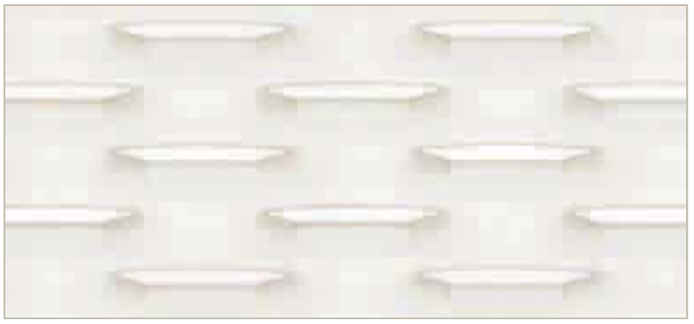
MONTE DUE MANI MULTI-PURPOSE CENTRE

Ballabio - Lecco (I)

Design: Arch. Augusto Colombo - Marcello Tommasi
Massimiliano Agostoni - Andrea Mattiroli
Photo: Chiara Aldeghi

Views of the modern structure with various recreational spaces. The exterior walls are made from Corten steel expanded metal mesh, a design that represents the close link of this geographical area with the metalwork industry.

Residence - R 45 x 18 - 8 x 1.5 mm - Corten



Italfim

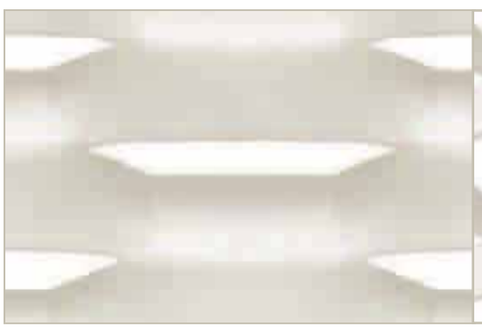
Corten steel has a natural colour
and a variable shade that eventually stabilise.
The choice of material made the building a good fit
with the surrounding landscape.

CAMERINO UNIVERSITY
Macerata (I)

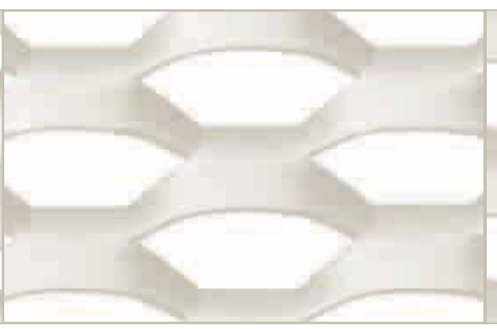
Design: PENSY
Photo: PENSY Archives
Expanded metall cladding: METALLTECH

Based on varies shades of green, the expanded mesh façade has given the Mathematics Faculty a face-lift improving, at the same time energy efficiency by means of different degrees of shading.

Exa 16 - E 80 x 30 - 13 x 2 mm - Powder coated AL.



Exa 05 - E 50 x 23 - 8 x 2 mm - Powder coated AL.

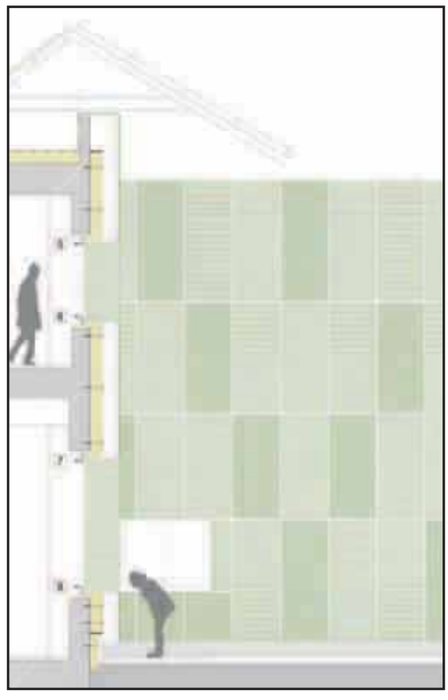


RB 65 - R 62 x 23 - 8 x 2 mm - Powder coated AL.

Italfim

The expanded mesh panels have changed the profile of the building, with open gaps for the pre-existing windows.

Panels folded on all 4 sides, with combinations of different mesh patterns and open areas for a unique result.



The expanded mesh cladding has a dual function: it protects the insulation layer from temperature spikes and it also improves the look of the building.

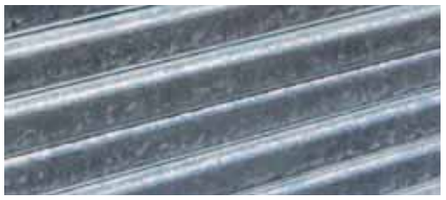
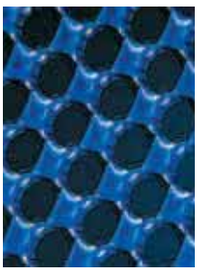
FINISH COMPARISON	CARBON STEEL + HOT DIP GALVANISING	CARBON STEEL + POWDER COATING FOR INDOOR	SENDZIMIR CARBON STEEL + POWDER COATING FOR INDOOR/OUTDOOR	ALUMINIUM + POWDER COATING FOR INDOOR/OUTDOOR	ALUMINIUM + ANODISING FOR INDOOR/OUTDOOR
Colour spectrum					
Corrosion resistance	★★★★	★★	★★★	★★★★★	★★★★



Hot-dip galvanizing
Hot-dip galvanizing is a surface coating treatment for the protection of metals based on the properties of molten zinc. Note that a hot-dip galvanized surface appears bright and shiny at first and it assumes a typical matt grey color over time.

Powder coating
In addition to the vast range of colours to personalize the design project powder coating also provides protection against corrosion. Different types of powder coating are available: epoxy resin, polyester, and epoxy-polyester coating, depending on the requirements.

Anodizing
Anodizing is a chemical electric process aimed to create a layer of oxide on the surface of aluminum. The layer provides protection against corrosion.



INNOVATIVE SOLUTIONS

METALLTECH (a Longhi Group partner) specialises in providing assistance during the design and engineering of expanded mesh cladding.
Thanks to research and innovation, some exclusive methods of processing expanded mesh have been developed.

Mesh MTC - LV - 43S - Metalltech Patented
